

Run Linux tool on Windows

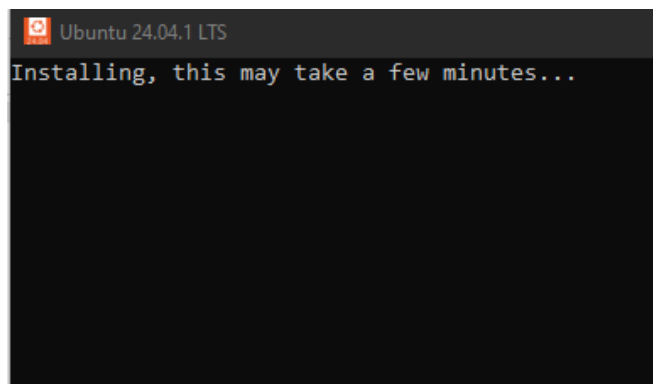

Make sure WSL (windows subsystem for Linux) is already enabled in your windows PC

Here is the list of steps be followed –

- 1) Install Ubuntu OS from Microsoft store

- 2) Then launch it, it will be installed in a moment.

- 3) Set username and password
- 4) Download and install **VcXsrv Windows X Server**
- 5) Run xLaunch app, click next ---next ---check disable access control ---next --- finish
- 6) In Ubuntu Linux type firstly “sudo apt update”

Then type these two commands one after another

```
echo 'export DISPLAY=:0' >> ~/.bashrc
```

```
source ~/.bashrc
```

- 7) Now you can run any installed ubuntu tool directly on windows by Ubuntu terminal , it will run in x launch terminal.
